As it happens: the global energy crisis

20 Oct 2021 (Last Updated October 29th, 2021 11:30)

The world is facing an energy crisis, as wholesale gas prices rocket and countries struggle to recover from shortages post-pandemic.

The Washington Post

Opinion: We're headed for a global energy crisis. What we need is a transition strategy.

The New York Times

An Electricity Crisis Complicates the Climate Crisis in Europe

Prices for power have soared, and some politicians are now trying to use that as a lever to slow action on climate change, a strategy with far-reaching consequences.
